

HisabDo — Day 14 QA Summary Report

Tester: Mohamed Hany

Project: HisabDo Capstone — Software Quality Assurance

Objective: Validate authentication, validation, session handling, protected access, navigation, and previously reported defects.

1. Test Execution Results

Scope	Total	Passed	Failed	N/A
Mobile	20	16	4	0
Website	15	13	0	2
Overall	35	29	4	2

2. Failed Test Cases

TC_D14M02 — Login with incorrect password: Login was rejected, but an unclear error message was displayed. Linked defect: **BUG_001**.

TC_D14M12 — Register with existing email: Registration succeeded with a duplicate email. Linked defect: **BUG_002**.

TC_D14M14 — Register with invalid email: Registration succeeded with an invalid email. Linked defect: **BUG_003**.

TC_D14M20 — Bug Verification: Previously reported authentication/registration defects were still reproducible. This is a verification failure and does not represent a new defect.

3. Defect Summary

Bug ID	Issue	Severity	Priority	Status
BUG_001	Unclear error message for wrong password	Medium	High	Open
BUG_002	Registration allowed with duplicate email	High	High	Open
BUG_003	Registration allowed with invalid email	High	High	Open

4. Website Notes

The website execution recorded 13 PASS and 2 N/A results. The N/A cases concern Login/Registration and Protected Routes because no public authentication or protected-route UI was exposed on the inspected website.

5. QA Conclusion

Day 14 execution covered 35 test cases in total: 29 passed, 4 failed, and 2 were not applicable. Three open defects were identified in authentication and registration. The next action is to fix the open defects and perform regression/verification testing using the same Bug IDs.

Overall Status: Needs Improvement / Open Defects
