

HisabDo — Day 13 User Feedback Report

Capstone Project | Track: Software Quality Assurance

Collected by: Mohamed Hany

Date: August 13, 2026

1. Overview

Feedback was collected from five users after reviewing and using the HisabDo mobile application. The feedback focused on ease of use, navigation, language settings, and the overall user experience.

User	Feedback / Suggestions	Issues Found	Recommended Improvement
Ahmed Hany	The application was easy to understand and the main features were straightforward to use.	No issues reported.	Continue keeping the main workflows simple and easy to navigate.
Yasmine Hany	The interface was clear and the application was generally easy to use.	No issues reported.	Maintain the current simple navigation and clear layout.
Mahmoud ElBahrawy	The application provides useful features and the overall experience was good.	No issues reported.	Continue improving the user experience as new features are added.
Abdaalla Mawas	The application was easy to explore and the main functions were understandable.	No issues reported.	Keep the interface intuitive and minimize unnecessary steps.
Mostafa Saleh	The application was generally easy to use, but changing the app language to Arabic did not successfully change the displayed language, which made the application harder to use.	Arabic language selection did not take effect.	Fix the Arabic language switching functionality and ensure the selected language is applied consistently across the application.

2. Overall Feedback Summary

Four users reported a positive overall experience and did not identify any issues. One user reported a language-switching issue when selecting Arabic, which affected usability.

3. Recommended Improvement

Prioritize verification of the language-switching feature, especially Arabic, and confirm that the selected language is applied correctly throughout the application.
